Q1:

Server:

```
# 23K-2001 Muzammil
import socket

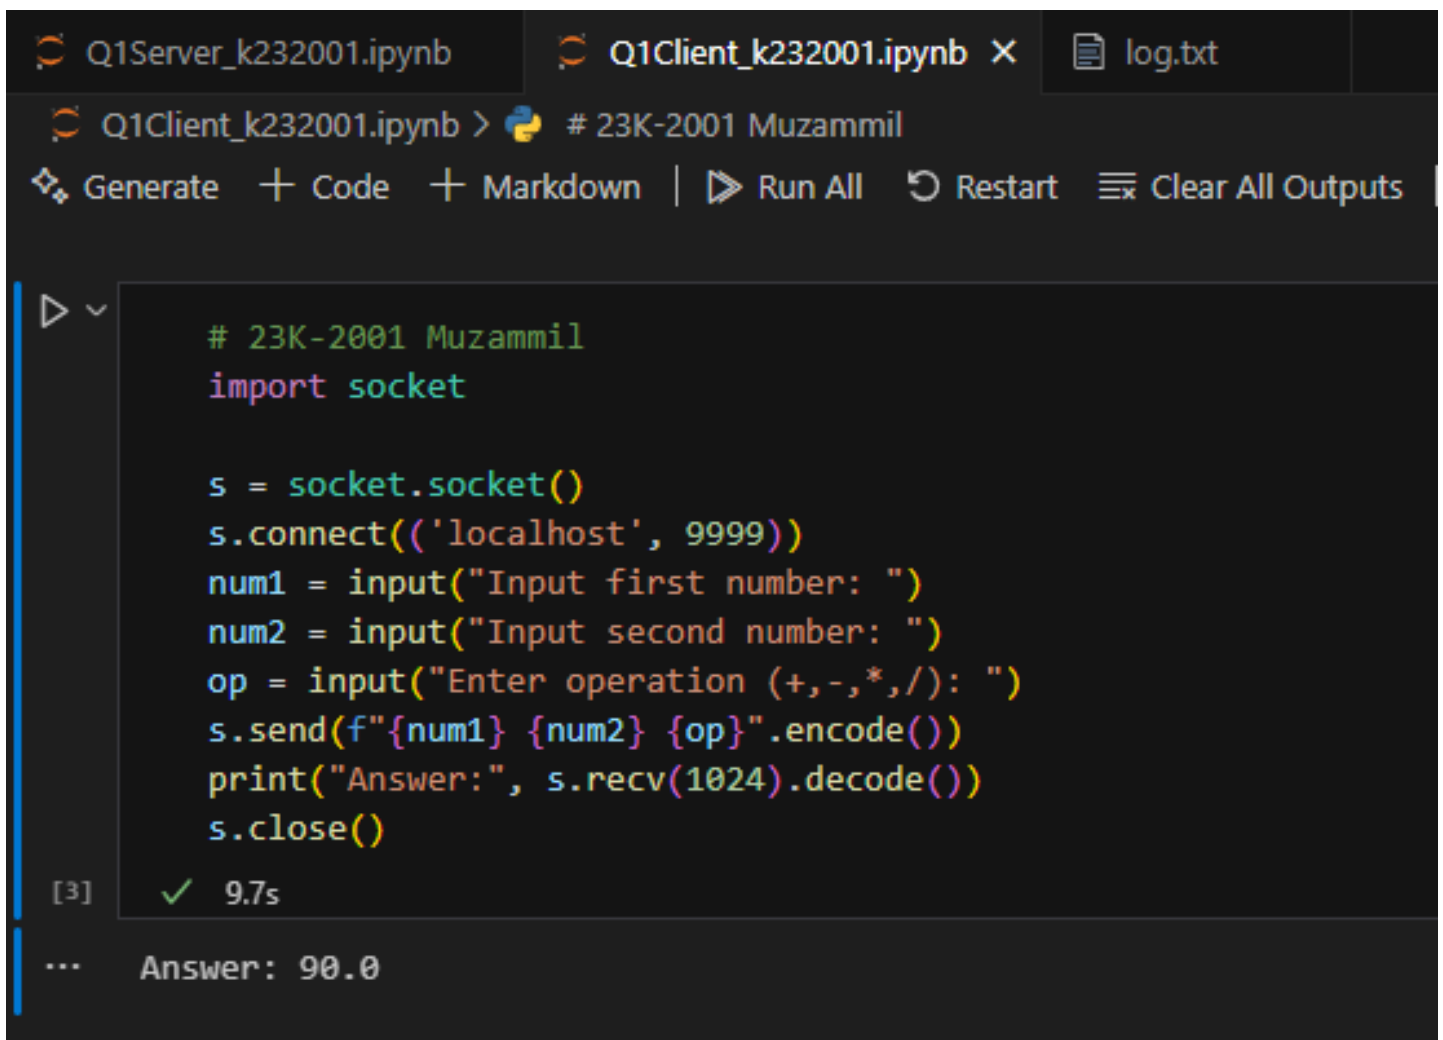

s = socket.socket()
s.bind(('localhost', 9999))
s.listen(5)

while True:
    c, addr = s.accept()
    data = c.recv(1024).decode()
    num1, num2, op = data.split()
    num1, num2 = float(num1), float(num2)
    print("Received:", num1, op, num2)
    if op == '+':
        result = num1 + num2
    elif op == '-':
        result = num1 - num2
    elif op == '*':
        result = num1 * num2
    elif op == '/':
        result = num1 / num2
    else:
        result = 'Invalid Operation'
    with open('log.txt', 'a') as f:
        f.write(f"{num1} {op} {num2} = {result}\n")
    c.send(str(result).encode())
    c.close()
```

Client:

```
# 23K-2001 Muzammil
import socket

s = socket.socket()
s.connect(('localhost', 9999))
num1 = input("Input first number: ")
num2 = input("Input second number: ")
op = input("Enter operation (+,-,*,/): ")
s.send(f"{num1} {num2} {op}".encode())
print("Answer:", s.recv(1024).decode())
s.close()
```

The screenshot shows a Jupyter Notebook interface with two tabs: 'Q1Server_k232001.ipynb' and 'Q1Client_k232001.ipynb'. The 'Q1Client_k232001.ipynb' tab is active, displaying the same Python code as the previous block. The code is executed, and the output is shown at the bottom: 'Answer: 90.0'. The interface includes a toolbar with options like 'Generate', 'Code', 'Markdown', 'Run All', 'Restart', and 'Clear All Outputs'. The code cell is marked as '[3]' with a green checkmark and a runtime time of '9.7s'.

```
# 23K-2001 Muzammil
import socket

s = socket.socket()
s.connect(('localhost', 9999))
num1 = input("Input first number: ")
num2 = input("Input second number: ")
op = input("Enter operation (+,-,*,/): ")
s.send(f"{num1} {num2} {op}".encode())
print("Answer:", s.recv(1024).decode())
s.close()
```
